WHERE & WHEN

[3rd International Conference on Internet Science, Florence](#)

Room 1, from 14:00 to 15:45

SHORT DESCRIPTION

Openness and collaboration are usually considered as essential elements of multistakeholder processes. Such processes aim at bringing together representatives from different sectors, including business, civil society, government, and academia, to address specific challenges. Over the past years, many examples of multistakeholder processes have been emerging in the Internet governance field. The purpose of this workshop is to analyse concrete examples of the aforementioned processes and initiatives to understand how, and under which conditions, open and participatory multistakeholder processes may lead to the elaboration of concrete policy solutions.
